Bicycle Route Classifications

Type I: Bicycle travel on a right-of-way completely separate from any street or highway. Such paths could have steep grades and bicyclists may share the right-of-way with pedestrians.

Type II: Provides a striped and signed lane for one way bike travel on a street. Generally located on wider and safer streets than Type III bikeways.

Type III: Provides sign only for designated bicycle travel on roadways shared with cars. In some cases, striping is provided for traffic calming, reducing the vehicle lane to twenty feet.
